

Symptom Intake & Triage Experience

A Zero-Latency, Client-Rendered Medical Assessment Engine

BATCH / SECTION

Batch 1 • Section 3GA

SEMESTER

Semester V

FACULTY GUIDE

Anurag Das

SUBMISSION DATE

17-10-2026

Traditional Online Triage Bottlenecks

Server Network Latency

Constant backend API round-trips for every question introduce delays during critical triage moments.

Unstable Connectivity

Weak cellular connections render traditional web intake forms slow, unresponsive, or completely broken.

Opaque Decision Path

Patients rarely see how their answers lead to risk outcomes, creating distrust in preliminary ratings.

ARCHITECTURAL SHIFT

The Client-Side Engine Advantage

0ms

Backend API Latency

Logic tree executes 100% inside the user's browser.

Instant Urgency Computation

Evaluates clinical severity risk in real time as choices are selected.

Interactive Reasoning Path

Displays a dynamic visual map showing answer-to-outcome logic.

Browser-Backed Clinician Queue

Holds flagged high-risk cases locally in IndexedDB for doctor review.

KEY MODULES

Core System Capabilities

Branching Engine

Dynamic question routing driven by patient inputs.

Confidence Meters

Animated indicators displaying live diagnostic confidence.

Visual Trail

Transparent visual tree tracing logic from start to triage.

Clinician Screen

Local storage queue for medical personnel review.

Tech Stack & Team Responsibilities

Technology Stack

Frontend: React.js, HTML5, CSS3, ES6+

Styling & Motion: Tailwind CSS, Framer Motion

State & Queue: Context API, LocalStorage, IndexedDB

Tooling: VS Code, Git, GitHub

Team Member Roles

AKASH SINGH	Frontend & Decision Tree Logic
AMRENDRA SINGH	UI/UX Design & State Architecture
ANSH VISHWAKARMA	Local Queue & Data Handling
ARHAM ZABI	Animations & Confidence Indicators
DEVANSH VARSHNEY	Research, Testing & Documentation

THANK YOU

Questions & Discussion

Symptom Intake & Triage Experience — Zero-latency client-side triage for modern web platforms.
